Control theory in control systems engineering is a subfield of mathematics that deals with the control of continuously operating dynamical systems in engineered processes and machines. The objective is to develop a control model for controlling such systems using a control action in an optimum manner without delay or overshoot and ensuring control stability.

Systems theory is the interdisciplinary study of systems. A system is a cohesive conglomeration of interrelated

and interdependent parts that is either natural or man-made. Every system is delineated by its spatial and temporal boundaries, surrounded and influenced by its environment, described by its structure and purpose or nature and expressed in its functioning.

For students with little to no background in computers. Building a foundation of basic computer skills, this module demonstrates how to identify different types of computers, the components of a personal computer (including internal components such as microprocessors), and how these components work together.
